PHP PROGRAMMING

Final Project
Worth: 50%

Due: April 2nd, 2019 at 8:30am
Late policy: No late assignments will be accepted

This project is to design, develop, publish, and maintain a PHP web site using recommended design practices.

You will work in teams, 3 to 4 members, to prepare final project. You should use all techniques covered in the previous courses such as HTML, Cascading Style Sheets, JavaScript and Web site Design. You will work on a web project of your own choosing (your teacher can provide ideas if needed).

Your topic and main concept of your final project should be approved by the teacher before continuing onto the other phase of your project. Once the topic of your website has been approved, complete the FINAL PROJECT EVALUATION form on Léa by Friday March 22th, 2019 before the end of class.

Your final project should have some level of interactivensess. Give the chance to the users to interact or to participate in the Web pages in some way. Possibly an administrative backend to view or administer the information collected by your web site.

Before starting to design a Web site, it is important to spend some time planning the site. Begin with a plan, create a wireframe and sample page sketches, generate a timeline, assemble the outline of the site and create a storyboard. These should all be handed with your final project files.

An easy way to make sure everything flows and is simple to navigate is to storyboard your Web site. It allows you to see what information goes where and how your site will be structure as well as how the site navigation needs to be set up and avoid you having to redo structure multiple pages.

- Collect the information that you want to include on the Web site.
- Sort the information into topics. This should help organize your navigation
- For each page of the Web site, determine page title, meta tags, sections, sub-sections and content.
- Plan the structure of the information and how the pages will link.
- Layout the menu and navigational structure of your Web site
- Layout your template page. The main structure of the pages of your Web site.
- Test the layout. Imagine that you can enter on any page. Does it work? If not, start again.

Your project is to include as many of the PHP, HTML, CSS, JavaScript features discussed and used in previous courses. It should have a minimum of 10 pages and adapted so that it works equally well on a desktop computer, tablet, or mobile phone.

You can create anything you think would be necessary for your Web site. Your site should be designed as a team project, and not individual pages built by different people and throw together at the end.

You will present your website to the class on Tuesday, April 2nd, 2019. For your presentation you should be prepared to show and demonstrate your Web site to the class, explaining the purpose behind each page/section as well as the overall purpose and goals of the Web site.

Deliverables

You are expected to hand in the following in your final submission.

- Entire Web site source files (HTML, CSS, JavaScript, PHP, etc...).
- A document describing your systems's information
 - Overall Goal of the Web site
 - Purpose of the Web site
 - Audience targeted by your Web site
 - Project description - major points of your Web application that make it the best at what it does
 - Two (2) ideas about how you could improve your website
- Web site's flowchart
- Wire frame originally designed for your Web site
- 10 pages of content pages will include at least:
 - One page containing a form with at least three elements,
 - Appropriate titles and meta tags on each page,
 - One page that uses tables effectively,
 - One thumbnail image,
 - One e-mail link,
 - One link to an external site,
 - One External CSS document
 - One External JavaScript document

Grading

Your grade will be based on the following criterias:

PHP (40%)

content, formatting, functions, forms, MVC, database connector, external libraries, etc...

MySQL (10%)

Database structure and efficient query usage

Error Handling (5%)

Security (5%)

Content (5%)

Spelling, punctuation, grammar (allowed to submit in French or English or both)

SEO (5%)

Graphic and images (5%)

JavaScript (5%)

Valid HTML and CSS (5%)

Layout (5%)

Overall Quality (10%)
